

## Vernon Boom Lift Training

Vernon Boom Lift Training - Elevated work platforms, also called aerial platforms, enable workers to perform jobs at heights which would otherwise be inaccessible. There are different types of lifts designed for various site conditions and applications. If operated carelessly, elevated work platforms could lead to death or serious injury. The most common reasons for related accidents are falls, electrocution, tip-overs and crushed body parts. Lift operators must be completely trained in procedures to prevent accidents while operating lifts.

The Aerial Lift Safety program provides required resources in order to help those required to learn how to operate these devices more effectively. Through the course, participants will receive thorough instruction. Types of lift covered comprise scissor, articulating and boom supported aerial lifts. The video presents the right methods operators must follow. Instruction focuses on protection against falls, pre-operational inspection, safe driving procedure and stability of the device.

The course addresses equipment reliability and employee safety. All instructional materials are compliant with provincial, state and Government agency requirements and regulations. Training methods and course management will be taught. The trainer will likewise know the technical aspects of aerial lift safety.

Components of the Boom Lift Training course include both practical training and classroom training. Both sessions must be successfully finished for the participant to receive a certificate of achievement.

The difference between self-propelled elevating work platforms and self-propelled boom-supported elevating work platforms is that, on the latter type, work platforms can be positioned totally beyond the base of the machinery. The theoretical component of the training is nearly identical for both types. The practical part of the training could be completed more quickly if just one kind of machine is utilized.

### Elevating Work Platform Training Program Objectives:

For safely operating Boom-Type Elevating Work Platforms and Self-Propelled Elevating Work Platforms, boom lift training will help operators make use of their equipment more effectively and would lessen the chances of workplace accidents. Trainees will review of business policies and applicable rules, talk about Due Diligence, review Criminal Negligence and consequences to trainers, employers, supervisors and employees. Participants would study equipment features, stability, operating procedures, fueling/charging procedures and parking. Site-specific safety issues will be dealt with.
