Vernon Aerial Lift Train the Trainer

Vernon Aerial Lift Train the Trainer - The Aerial Lifts Train the Trainer Certification Program will teach trainers how to effectively train operators in safe industrial mobile machinery operation. Trainers are given in-depth instruction about aerial lift equipment. The program is provided on an open enrollment basis and delivered at select training sites. Before the certification, trainers are evaluated and scored on their understanding and demonstrated skills.

The Aerial Lifts Train the Trainer Certification Program emphasizes practical learning. As the best training provider in the industry, we offer the best hands-on training possible through opportunities to practice techniques and concepts taught in the classroom. In addition to hands-on experience, trainers develop general knowledge of instructional methods and machine theory, classroom and field communication skills, and ability to effectively train and evaluate operators. Trainers will gain an understanding about what traits make an effective trainer.

The Aerial Lift Train the Trainer Certification Program teaches the instructional methods involved in communicating concepts inside a classroom and/or field situation. Knowledge requires a training component to be effectual in workplace situations. There are three aspects of machine operation which the trainer should learn how to convey to operators: what to carry out; how to do it; and the reason why it needs to be carried out.

In the program, trainers will be given the detailed, latest reference material to better help them convey the information to machine operators. The instruction manuals used, include detailed information on all aspects of industrial mobile equipment operator training. Incorporated within the package are training aids which provide a visual reference to be able to improve the learning experience. The equipment-specific training products contain necessary materials intended for both the trainer and the operator: overhead transparencies, videos/DVD's, safety message posters, equipment models; digital training aids and stability pyramid.
